

PAXSTORE Solution

Your Own Independent Appstore Marketplace

Are you deploying Android SmartPOS terminals?

Do you want to manage your own appstore service?

Looking for ways to add value for your merchants?

PAXSTORE is a secure cloud-based (SaaS) platform that allows you to create and manage your own independent white-label marketplace for software application distribution. PAXSTORE turns your entire POS terminal estate into a well-organized multitasking community, so you can now do more for your business than you ever imagined.

Your Own App Store

Similar in principle to the concept of Apple's AppStore or Google's Play, PAXSTORE is a controlled and secure software distribution platform that offers new revenue streams for organizations deploying SmartPOS terminals to a merchant estate.

As a Payment Service Provider you can approve 3rd party software applications that will be offered to your merchant through your PAXSTORE marketplace, with full administration controls and within a secure encrypted environment.

An Integrated TMS Platform

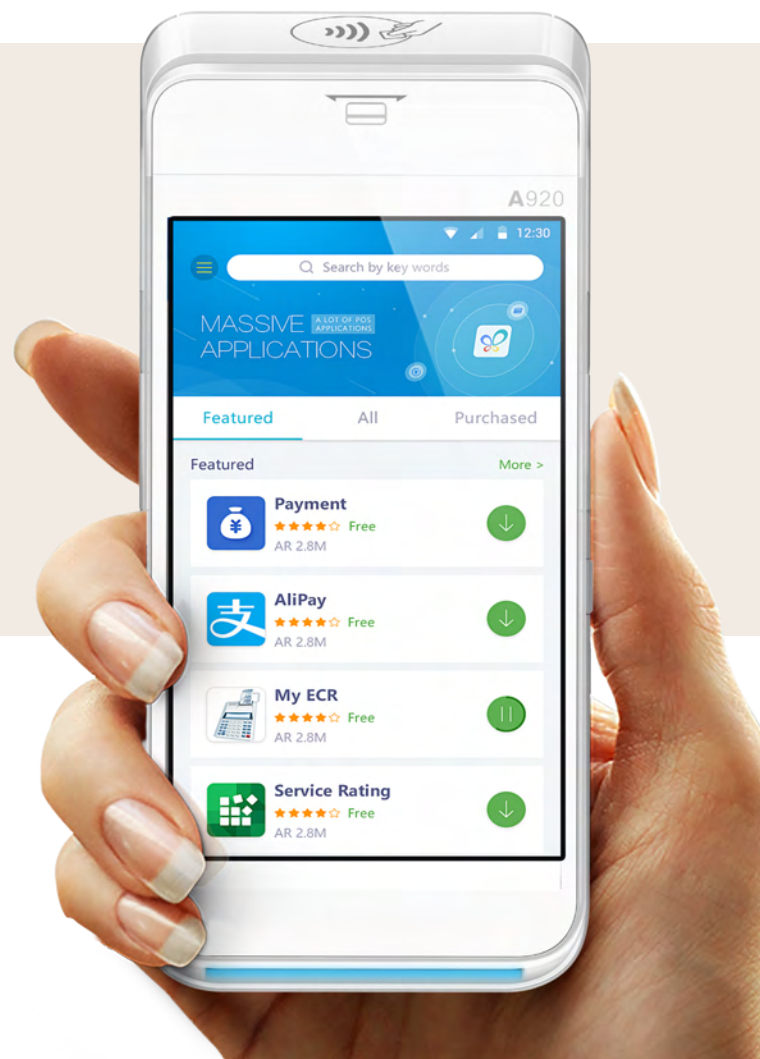

The PAXSTORE integrates seamlessly with your existing Terminal Management System, enabling real-time access control and remote configuration to your terminal network.

Smart Data Analysis

A suite of business management tools within PAXSTORE can help run your business more efficiently and cost effectively than before, providing deep data analysis of daily merchant and transaction operations, allowing you to gain a better understanding of your customer.

PAXSTORE Benefits

-  Create your own independent appstore marketplace & generate new revenues
-  Offer merchants a level of terminal service never experienced before
-  Remotely manage your merchant base via one modern business system
